

HONEY BEE POLLEN

COLD PROCESSED - ALL NATURAL

Honey Bee Pollen

Worlds Most Perfect Food

Honey Bee Pollen provides a pure, all-natural, and highly potent life-giving, life-extending food. The human system is composed of twenty-two elements. **Honey Bee Pollen** contains all of these elements in a form easily assimilated by the body. **Honey Bee Pollen** regulates and stimulates metabolism by supplying the missing factors other foods cannot supply and offsets the effects of toxins, pollutants, and drugs. **Honey Bee Pollen** contains all of the known vitamins, minerals, trace minerals, essential proteins, amino acids, enzymes, coenzymes (over 5,000), and hormones known to man. These nutrients are in perfect balance, and its use dates back to the Old Testament.

Natural Weight Control

The properties of **Honey Bee Pollen** work to correct a chemical imbalance in the metabolism which may be contributing to abnormal weight gain.

These statements have not been evaluated by the FDA.

To safely help control weight, **Honey Bee Pollen** should be used as follows: take **Honey Bee Pollen** at least 15 minutes before meals with eight ounces of water. **Honey Bee Pollen** is of an additional benefit in that it produces an antiputrefactive effect, contributes to a healthy digestive system, and aids in assimilation of nutrients. 130 mg. of **Honey Bee Pollen** helps to digest three pounds of food. Experiments show that those who take **Honey Bee Pollen** decrease their daily intake of food by 15% to 20%.

Human Sexuality

Sexual impotence in men is far more frequent than is generally thought. Because **Honey Bee Pollen** is nature's own propagator of life, it is easy to understand how people could assume its enhancing effect on sexual health. Still another component of **Honey Bee Pollen** is a gonadotropic hormone (a plant hormone similar to the gonadotropin secreted by the human pituitary gland as a stimulant to the sexual organs). European countries prescribe **Honey Bee Pollen** as a natural formula that helps correct conditions of male impotence and strengthens female sexual powers.

Increase Energy, Stamina, & Endurance

Many doctors, coaches, athletes, and professional people are finding that **Honey Bee Pollen** increases zest, energy, stamina, and endurance. Clinical evidence shows that **Honey Bee Pollen** speeds up the recovery process of exercise. It increases performance as well as relieves signs of brain fatigue and improves mental and physical reflex actions. Since European Gold Medal Olympic coaches introduced **Honey Bee Pollen** to American athletes, they have been using it and consider it to be "energy in a tablet". This is not available from any other non-drug source!

Hay Fever & Allergies

It should be understood that the pollen loosed in the atmosphere and carried by the wind is not the pollen that is collected by the bees. The pollen that the bees search for and collect is a

sticky pollen that is too heavy to be air-borne. In addition, the bees mix pollen with nectar and bee saliva which neutralizes and destroys allergic principles and makes **Honey Bee Pollen** a respiratory strengthening food that can help and, in some cases, even prevent allergies. Pollen is also a prime source of protein which can cause an elevation of the gamma globulins of the body. These substances can help the body build natural immunity defense reactions which offer a shield against allergic distress.

Few people find that they have an allergy to Honey Bee Pollen. But anyone can be allergic to anything. So, start out with 1/8 tablet and increase that amount every other day until you are taking at least 3 tablets per day. An allergic person, then, can build up a tolerance and see the allergies improve.

Steve Riddick, the fastest man on earth, has been taking Honey Bee Pollen since 1974. He said that after just two months he felt an upsurge in strength, endurance, and speed. "As if my body shifted into a more powerful gear." *Let's Live Magazine* (June 1979)

Dr. Winferd Holt, a dentist and nutritionist, has interviewed hundreds of people who take Honey Bee Pollen and reports evidence of higher energy levels, weight loss, lower blood pressure, fewer colds, and a decrease in allergies. He states that the American diet is grossly deficient in providing the nutrients necessary to maintain good health. Both Dr. Holt and his wife, Lester, have taken Honey Bee Pollen since 1979 and can personally document a marked improvement in their health and vigor.

University of Sarajevo's study of a group of impotent men in Yugoslavia revealed that more than half of them experienced a dramatic improvement after just one month.

Honey Bee Pollen must be certified cold-processed in order to receive maximum benefits. If the pollen is subjected to high temperatures in normal processing, it can lose its effectiveness up to 75%. Our **Honey Bee Pollen** is cold-processed and is from a high desert source. Our pollen has not been exposed to herbicides, pesticides, pollutants, and other chemicals common with today's agricultural methods.
